

# Split Strategy

$$\underline{36} + \underline{57} = ?$$

First decompose the numbers into just the tens. Then add them together.

$$\underline{30} + \underline{50} = 80$$

$$6 + 7 = \underline{13} (10+3)$$

Then add the ones together.

$$93$$

The sum is found by adding the tens and ones together.

36	→	30	6	80
+ <u>57</u>	→	<u>50</u>	<u>7</u>	+ <u>13</u>
		<b>80 + 13</b>		<b>93</b>
